## Profile

---

Detail-oriented AI Analyst with experience in business analysis, process improvement, and AI-driven solutions. Skilled in translating business requirements into functional AI and automation solutions, collaborating with cross-functional teams, and supporting the full lifecycle of AI initiatives from discovery to deployment. Proficient with AI/ML concepts, LLMs, prompt engineering, RPA, low-code/no-code automation platforms, and cloud AI services (Azure, AWS, Google). Strong communicator with expertise in stakeholder engagement, data governance, and higher-education IT systems, committed to delivering actionable insights and high-value automation outcomes.

## Experience

---

**Systems & Development Assistant**, Old Dominion University - Norfolk, VA May 2025 - Present

- Maintained and updated academic course data in the NOC (Network Operations Center) portal, ensuring accuracy across instructional systems and scheduling tools.
- Supported video content management by uploading, organizing, and monitoring lecture recordings in Panopto, streamlining access for faculty and students.
- Collaborated with IT staff to troubleshoot system issues and provided technical support related to academic media and course data tools.

**Database Administrator**, Old Dominion University – Norfolk, VA Oct 2023 - May 2025

- Collaborated with cross-functional teams and faculty staff to define requirements for analytics projects aimed at improving student outcomes.
- Developed curated datasets from raw data (SQL, Python) and built ETL pipelines to support institutional dashboards and predictive modeling efforts.
- Assisted in validating and synchronizing course information between internal databases and external platforms, helping optimize course delivery and reporting workflows.
- Created automated workflows and self-service Power BI dashboards to visualize KPIs like retention, enrollment, and course engagement.
- Ensured compliance with data governance policies (FERPA, HIPAA) across data workflows, emphasizing data security and integrity.
- Documented metadata, data lineage, and technical architecture for reproducibility and knowledge sharing.
- Assisted in building scalable data infrastructure integrating platforms like Kaltura and SharePoint for research and curriculum analytics

**Data Insights Analyst – Reporting & Media**, Andhra Jyothi - India May 2022 - May 2023

- Built and maintained interactive dashboards and reports using Power BI and Tableau to support strategic decision-making.
- Conducted statistical analysis and pattern recognition using Python to generate data-driven recommendations.
- Utilized predictive models such as Linear Regression and Decision Trees to forecast trends and stakeholder needs.
- Translated complex datasets into actionable insights, enabling informed decisions across departments.
- Collaborated with cross-functional teams to enhance data-driven strategies and improve business outcomes.

**Quality Assurance Tester**, DVR & DR.HS MIC College of Technology - India Dec 2021 - May 2022

- Conducted comprehensive quality assurance testing on website content and functionality to ensure optimal user experience.
- Verified and updated web content for accuracy, consistency, and proper display across various pages and devices.
- Ensured cross-browser and cross-device compatibility to improve accessibility and performance.
- Utilized SQL and Python (Pandas, NumPy) for data validation, processing, and error detection in large-scale datasets. Reported and tracked defects, provided feedback to developers, and participated in regression testing.

## Education

---

Old Dominion University, Master's in Computer Science

Virginia, USA

DVR & DR.HS MIC College of Technology, Bachelor's in Computer Science

Andhra Pradesh, India

## Technologies

---

**Cloud Project Tools:** Git, GitHub, Databricks, Microsoft Project, Monday.com, ServiceNow, Microsoft Excel

**Databases SQL:** MySQL, SQL Server, SQLite

**Data Science Storage:** Hadoop, Hive, JSON, Matplotlib, Spark, XML, R

**ETL Data Processing:** Informatica, SQL, Bash, Pandas, NumPy

**Programming Languages:** Python, Java, C, JavaScript, PHP

**Visualization Reporting:** PowerBi, Tableau

**Web Development:** HTML, CSS, JavaScript, Bootstrap, JSP, Django, WordPress

**Soft Skills:** Analytical thinking, Strong communication, Organization, Prioritization, Attention to detail, Insightful

## Projects

---

### Predictive Modeling of Housing Price Index Changes

Fall 2023

- Built a machine learning model to predict housing price shifts using historical housing data.
- Applied data preprocessing techniques to clean and prepare the dataset for analysis.
- Utilized Linear Regression for continuous price predictions and Decision Tree algorithms for classification tasks.
- Evaluated model performance using metrics like RMSE (Root Mean Squared Error) and accuracy scores.
- Provided insights into housing market trends to aid in better pricing and investment strategies.

### Data Visualization of Airbnb Listings in Albany

Spring 2024

- Analyzed Airbnb listings data from Albany to identify trends, seasonal variations, and pricing patterns using Python for data processing and cleaning.
- Utilized Pandas and NumPy in Python for data manipulation, transforming raw data into a structured format.
- Employed Tableau to create interactive visualizations, showcasing price distribution, availability, and market trends in the Airbnb listings.
- Identified key insights, such as peak rental periods and pricing strategies, to help hosts optimize listings and improve decision-making.
- Applied exploratory data analysis (EDA) techniques to identify outliers and correlations in the dataset, enhancing the visual storytelling with clear, data-driven insights.

### Irrigation Data Analysis

Spring 2023

- Analyzed irrigation patterns and water consumption trends to optimize agricultural water usage.
- Utilized SQL and Python (Pandas, NumPy) to process and analyze large-scale irrigation datasets.
- Applied predictive modeling to estimate future water demand based on weather and soil conditions. Developed data visualizations using Tableau to present insights on irrigation efficiency.
- Identified inefficiencies in water usage and proposed data-driven solutions to reduce wastage.
- Applied time series forecasting and regression to model water demand, incorporating seasonal and climate-based variables.

### Quality Assurance Testing for Apptitude Tips Website

Spring 2022

- Conducted thorough quality assurance testing on the website, focusing content accuracy and site functionality.
- Verified website content, ensuring all information was up-to-date and displayed correctly across different pages.
- Tested user interfaces for seamless interaction, ensuring a smooth user experience on both desktop and mobiles.
- Ensured website compatibility across various browsers and devices, addressing issues to enhance site accessibility and reliability.
