Profile

Master's in Computer Science with 4+ years of higher-education experience spanning ERP and enterprise applications, business analysis, SQL/database development, systems integration, API-based data exchange, ETL, reporting, application support, and data management. Experienced in analyzing business processes, translating functional requirements into technical solutions, troubleshooting enterprise applications, validating system changes, and improving data flows across university environments. Strong technical background in SQL/T-SQL, SQL Server, Python, REST APIs, JSON, XML, CSV, ETL/ELT, data mapping, transformation, reconciliation, Power BI, and enterprise systems including Banner, Ellucian, PeopleSoft, Salesforce, Slate, Workday, and Oracle. Proven ability to collaborate with business users, IT teams, application owners, and stakeholders to support implementations, integrations, testing, production operations, documentation, and process improvement.

Experience

Systems Analyst, Old Dominion University - Norfolk, VA May 2025 - Present

- Analyze & support university data, enterprise apps, instructional systems, technology workflows, translating functional requirements into tech solutions involving SQL, automation, validation, reporting, app integrations.
- Develop and maintain data extracts, validation processes, reconciliation workflows, and reporting solutions to improve data quality, accuracy, consistency, trustworthiness across academic, instructional information systems.
- Troubleshoot app, integration, data, workflow issues by profiling information, investigating errors, performing root-cause analysis, validating system behavior, coordinating remediation with tech, functional stakeholders.
- Support API-driven and cloud-based integrations involving enterprise university platforms and services, including Ellucian environments and Lambda-based processes, validating data movement, transformations, outputs, and downstream application behavior.
- Design and improve automated workflows using APIs, Kaltura/KMC, Monday.com, SharePoint, and related technologies to streamline recurring processes, reduce manual intervention, and improve operational reliability.
- Collaborate with faculty, staff, IT teams, application owners, and functional stakeholders to define requirements, document data flows, business processes, test changes, validate results, implement technology improvements.
- Support enterprise content and instructional platforms including Panopto, Kaltura/KMC, SharePoint, academic systems while maintaining technical documentation, metadata, process information, operational procedures.
- Apply data governance, access-control, information-security, documentation, and data-quality practices while working with institutional information and enterprise systems requiring accurate, traceable, and reliable data.

Database Administrator, Old Dominion University - Norfolk, VA Sep 2023 - May 2025

- Administered, supported university database environments using SQL Server, developing complex queries, data extracts, validation routines, database solutions supporting academic, administrative, enterprise app processes.
- Analyzed data structures, relationships, and business requirements to develop SQL-based solutions, troubleshoot data issues, improve data flows, support accurate information exchange across connected university systems.
- Developed Python- and SQL-based ETL processes to extract, transform, reconcile, validate, and load institutional data for enterprise applications, reporting, analytics, and operational workflows.
- Supported integration and synchronization of course and institutional information across university systems by validating source-to-target mappings, investigating discrepancies, ensuring data consistency b/w applications.
- Developed and maintained institutional reporting datasets and analytical solutions using SQL, Power BI, and Tableau, translating business reporting requirements into reliable data outputs.
- Collaborated with functional users, application teams, technical stakeholders to understand business processes, document requirements, test system, database changes, validate results, support production improvements.
- Investigated database and application issues through query analysis, data profiling, reconciliation, and root-cause analysis, documenting technical findings and implementing or coordinating corrective actions.
- Maintained database documentation, data definitions, access controls, data-quality procedures, and operational processes supporting secure and reliable higher-education enterprise data.

Data Insights Analyst, Andhra Jyothi, India

May 2022 - May 2023

- Analyzed structured business data using SQL, Python, Pandas, and Excel to identify data-quality issues, operational trends, inconsistencies, and opportunities for process improvement.
- Developed complex SQL queries using joins, filtering, aggregation, transformation, and relational data concepts to retrieve and analyze business information.
- Performed data cleansing, validation, reconciliation, transformation, duplicate detection, and integrity checks to maintain accurate and reliable analytical datasets.
- Investigated discrepancies between source and reporting data, tracing relationships and transformation logic to identify root causes and resolve data inconsistencies.
- Developed recurring and ad hoc Power BI and Tableau reports and dashboards using validated datasets to communicate KPIs, trends, and operational insights.
- Supported data integration and exchange processes by validating source data, investigating synchronization issues, and resolving transformation and data-quality problems.
- Gathered reporting and analytical requirements from stakeholders and translated business needs into SQL queries, data solutions, reports, dashboards, and documented workflows.
- Collaborated with cross-functional stakeholders to troubleshoot data issues, improve reporting processes, automate repetitive analytical activities, and document technical procedures.

Quality Assurance Tester, DVR & DR.HS MIC College of Technology- India

Dec 2021 - May 2022

- Developed SQL- and Python-based processes to validate database structures, data transformations, ETL pipelines, application outputs, and enterprise data-processing workflows.
- Developed complex SQL queries for data extraction, reconciliation, transformation, aggregation, auditing, and validation across relational database environments. Tested ETL and integration workflows by validating source-to-target mappings, transformation rules, data completeness, consistency, integrity, downstream outputs.
- Performed functional, integration, regression, database, and data-quality testing to validate changes across applications, databases, and data-processing systems.
- Investigated database and integration defects by analyzing data structures, relationships, transformation logic, application behavior, and processing results to determine root causes. Created reusable Python automation for data validation, reconciliation, quality checks, and testing, reducing repetitive manual data-processing activities.
- Collaborated with developers, database teams, business users, and technical stakeholders to validate solutions, resolve defects, and ensure reliable data-processing outcomes. Documented database validation procedures, data-quality findings, integration defects, corrective actions, testing results, and technical observations.

Technologies

Integration Technologies: REST APIs, API Integration, SFTP, Secure File Transfer, JSON, XML, Data Exchange

Cloud Project Tools: Git, GitHub, Databricks, Microsoft Project, Monday.com, ServiceNow, Microsoft Excel

Databases SQL: MySQL, SQL Server, SQLite

Data Science Storage: Hadoop, Hive, JSON, Matplotlib, Spark, XML, R

ETL Data Processing: Informatica, SQL, Bash, Pandas, NumPy

Programming Languages: Python, Java, C, JavaScript, PHP

Visualization Reporting: Power BI, Tableau, Dashboard Development, KPI Reporting, Data Visualization, Business Intelligence, Reporting Automation, Data Storytelling

Web Development: HTML, CSS, JavaScript, Bootstrap, JSP, Django, WordPress

Education

Old Dominion University, Master's in Computer Science

Virginia, USA

DVR & DR.HS MIC College of Technology, Bachelor's in Computer Science

Andhra Pradesh, India

Projects

Predictive Modeling of Housing Price Index Changes

Fall 2024

Data Visualization of Airbnb Listings in Albany

Fall 2023
